The present invention relates to a flank transfer device for light transmission plates. The flank transfer device includes a transfer head 1 and a light transmission plate fixing device 4. The transfer head 1 includes a transfer pad 11 which can thrust the transfer materials to the light transmission plates from a transverse direction, a heater 12 which heat the transfer pad and transfer material supplying devices 13 which deliver the transfer materials to the front of the transfer pads. The light transmission plate fixing device 4 has a table 42 for fixing the light transmission plates and can thrust the transfer pad of the transfer head to the flanks of the light transmission plates 41 fixed on the table 42 of the light transmission plate fixing device 4 from the transverse direction, thereby transferring the flank reflection layer of the transfer materials 14 to the flanks of the light transmission plates.
